▾ // THE BRIEF HIDE

What stands out across today's releases, grouped by what it lets you do. Every tool named links to its entry below.

Three unrelated things stand out. Mistral shipped Mistral Large 4 in preview plus custom guardrails that run on Agents and Conversations than in your prompt. AutoRound now searches quantization grids

vim ? help

without a calibration set and tunes MoE models over 3× faster. And SGLang landed a page-granular buffer that holds KV and Mamba state in one allocator.

DEPLOY

Quantize a model without assembling a calibration set first

AutoRound's calibration-free NeUQI grid search removes the step where you hunt for representative data before you can compress anything, and 5/6/7-bit weight-only support via Humming Kernel gives you rungs between the usual 4 and 8 when 4-bit loses too much accuracy. LMCache's multi-L1 placement across DRAM, Device-DAX and GDS lets you spill KV cache to the tier you actually have spare rather than evicting it.

AutoRound · LMCache

DEPLOY

Serve hybrid attention/Mamba models without two separate memory pools

SGLang's unified page-granular KV/Mamba-state buffer means a model mixing attention layers and state-space layers draws from one allocator instead of two fragmenting pools, which is where hybrid architectures usually lose their throughput advantage. Mamba's new Mamba3 block with MIMO support and env-var controls for building the CUDA selective-scan extension makes the kernel build less of a guessing game.

SGLang · Mamba

BUILD

Give a coding agent memory that survives the session and the repo

MegaMemory's MCP server keeps a per-project knowledge graph in SQLite with explicit conflict detection, so an agent that learns a convention on Monday still has it on Friday instead of re-deriving it from the file tree. Weaviate's Engram does the same across repos and shares it team-wide — the difference between every engineer's agent relearning the codebase and one of them teaching it.

MegaMemory · Weaviate

BUILD

◆ AI Coding Agents

All Hands AI OpenHands

Feedback ⓘ announced · Oct 7, 2026

BLOG ↗ RANK

OpenHands is an open-source software-development agent that writes code, runs commands, and browses the web.

> OpenHands' Agent Canvas (v1.17.0–v1.24.0) shipped Docker-isolated conversation runtimes, scoped Agent Profiles for automations, and `/plan` – `/code` mode switching, alongside expanded Git-host support for Apps, automation detail-page transparency, and a batch of UI additions (tags, themes, folder collapse, image expansion).

└──▷ WHAT SHIPPED · 9 FEATURES most completely described first ? what's the number?

01 **/plan and /code mode switching** Not checked yet NEW 75

Adds `/plan` and `/code` slash commands to switch between Plan Mode, where the agent reasons through a task before writing code, and Code Mode.

Switch the current conversation into Plan Mode to have the agent reason through a task before writing any code.

```
$ /plan
```

– Exact runnable slash commands given launch-20261007-3a191255

02 **Agent Profiles for automations** Not checked yet NEW 65

Agent Profiles (v1.20.0) let each automation run with a saved profile that scopes which MCP servers, secrets, and tools are available to that agent.

– Names scoped resources but no config surface shown launch-20261007-3a191255

03 **Expanded Git host support for Apps** Not checked yet IMPROVED 65

Apps now accept GitHub tree URLs, GitLab, Bitbucket, Gitea, and Forgejo repository folder URLs as valid App sources, with Canvas auto-filling source, revision, and path (v1.21.0).

– Names every supported host, no config key given launch-20261007-3a191255

THINNER COVERAGE BELOW

04 **Automation detail page transparency** Not checked yet IMPROVED

55

The automation detail page now surfaces which identity an automation runs as (v1.18.0) and shows structured disablement reasons with a timestamp when an automation is turned off manually or after repeated dispatch failures (v1.19.0).

— Names UI location, lacks exact field names launch-20261007-3a191255

---

05 **Docker-isolated conversation runtimes** Not checked yet NEW

50

OpenHands can run each conversation in its own isolated Docker container, enabled via a single environment variable, so agents can work in parallel without sharing an execution environment.

— Explains mechanism but omits the env variable's name launch-20261007-3a191255

---

06 **Conversation tags and sidebar filters** Not checked yet NEW

45

Adds conversation tags with visible tag chips and sidebar filters for tags and automation names (v1.17.0).

— Describes UI feature without further mechanism launch-20261007-3a191255

---

07 **Collapse or expand all workspace folders** Not checked yet NEW

40

Adds one-click collapse or expand of all visible workspace folders from the Conversations header (v1.24.0).

— Clear UI action, minimal mechanism described launch-20261007-3a191255

---

08 **Light+ and Solarized Light themes** Not checked yet NEW

30

Adds Light+ and Solarized Light themes (v1.23.0).

— Bare addition with no further detail launch-20261007-3a191255

---

09 **Full-size image attachment expansion** Not checked yet NEW

30

Adds image attachment full-size expansion on click (v1.18.0).

— Minimal one-line description of the feature launch-20261007-3a191255

WAS THIS USEFUL? 👍 👎

Warp

Feedback ⓘ announced · Oct 7, 2026 BLOG ↗ RANK

Warp is an AI terminal that runs commands and helps developers build software.

> Warp Factories now integrates natively with Microsoft Teams and Azure DevOps Services for triggering agent work, and both integrations can be defined as version-controlled configuration via Factories as Code.

└──▷ **WHAT SHIPPED · 3 FEATURES** most completely described first ? what's the number?

01 **Azure DevOps Services integration for Warp Factories**

Not checked yet NEW 65

Adds native Azure DevOps Services integration to Warp Factories, enabling @mention triggers from work items and pull requests, event-driven automations, scoped repository access, and per-factory Git and PR identities.

– Several concrete mechanisms named, UI entry point shown in media.

launch-20261007-3f70e60f

THINNER COVERAGE BELOW

02 **Microsoft Teams integration for Warp Factories** Not checked yet

NEW 50

Adds native Microsoft Teams integration to Warp Factories, enabling agents to be triggered by @mentions in channels and threads, with results and PR reviews returned to the same thread.

– Names trigger mechanism and output destination, no setup steps given.

launch-20261007-3f70e60f

03 **Factories as Code for Teams and Azure DevOps triggers**

Not checked yet NEW 50

Exposes both the Microsoft Teams and Azure DevOps integrations as version-controlled configuration via Factories as Code, allowing teams to define triggers, automations, and agents in code.

– Describes config-as-code mechanism but no file or syntax example.

launch-20261007-3f70e60f

AGENT

◆ MCP Servers & Tooling

Composio

Feedback ⓘ announced · Oct 8, 2026 BLOG ↗ RANK

Composio connects AI agents to external tools and services with managed authentication and integrations.

> Composio launched Composio Instant, letting agents pay per call for 100+ premium third-party tools via a built-in wallet with no provider signups, and added dozens of new toolkit integrations spanning security, data enrichment, and MCP services.

└──▷ WHAT SHIPPED · 2 FEATURES most completely described first ? what's the number?

01 **Composio Instant pay-per-call tools with wallet** Not checked yet

NEW 93

Composio Instant (introduced in docs as a new `Instant Tools` capability class for toolkits) lets agents access and pay for 100+ premium third-party tools — including Apollo, People Data Labs, Exa, Parallel, Higgsfield, and ZeroBounce — on a per-call basis with no provider account creation or subscription required. Enable it via the `instant` parameter on composio.sessions.create() (Python) or composio.create() (TypeScript), using the `instant.toolkits.enable` sub-field, alongside normal user-connected apps. Setting `instant.returnInstantCharge` / `return_instant_charge` to true adds an `instant_charge` (Python) / `instantCharge` (TypeScript) field to each Instant tool call response so developers can track or pass through per-call cost. Every account gets $2 of Instant credit at signup, Pro accounts get $29 of credit monthly, and failed calls are never charged; it can also be toggled on from the dashboard's project settings under `Composio Instant`, with available providers browsable under `Composio For You`.

Give an agent pay-per-call access to Parallel (Instant) while using the user's own Gmail connection, and capture the per-call charge in each response for billing.

```python
from composio import Composio

composio = Composio()
session = composio.sessions.create(
    user_id="user_123",
    toolkits=["parallel", "gmail"],
    instant={
        "toolkits": {
            "enable": ["parallel"]
        },
        "return_instant_charge": True,
    },
)
tools = session.tools()
# Each Instant tool response now includes 'instant_charge'
```

Same flow in TypeScript: enable Instant for Parallel with charge reporting so your app can surface or pass through per-call costs to end users.

```typescript
import { Composio } from "@composio/core";

const composio = new Composio();
const session = await composio.create("user_123", {
  toolkits: ["parallel", "gmail"],
  instant: {
    toolkits: { enable: ["parallel"] },
    returnInstantCharge: true,
  },
});
const tools = await session.tools();
// Each Instant tool response includes 'instantCharge'
```

Enable Composio Instant for a project from the dashboard so agents can immediately start spending wallet credit on supported tools.

📍 1. Open your Composio dashboard. 2. Go to your project settings. 3. Find Composio Instant and toggle it on. 4. Browse available Instant apps at Composio For You to confirm which providers are wallet-enabled.

— Names params, fields, credit amounts, and includes runnable code and dashboard steps.

launch-20261008-ac841e8a

THINNER COVERAGE BELOW

02 **Dozens of new toolkit integrations** Not checked yet NEW

45

Composio added VirusTotal, E2B, IPinfo, IQAir AirVisual, GraphHopper, HERE, OData, PlanetScale, Wolfram|Alpha API, ZeroBounce, ScrapeGraphAI, SignNow, ServiceTitan, SendPulse, FullEnrich, CompanyEnrich, DataForSEO, Financial Datasets, Glide MCP, Plain MCP, Cashfree MCP, Callback24, AdRoll, HighLevel Agency, Job Search (Rapid API), Linq, Unleash, Vaquill, TemplateFox, POMA Grill, CrewAI, and Disqus as new toolkit integrations.

— Names every integration but gives no usage mechanism beyond the list. product docs

WAS THIS USEFUL? 👍 👎

◆ AI Agent Frameworks

Arcade

Feedback ⓘ announced · Oct 7, 2026 BLOG ↗ RANK

Arcade provides an actions runtime that lets AI agents securely call external services with authorization and governance controls.

> Arcade launched Private Registry, a browser-based UI served directly at an existing MCP gateway URL that lets end-users discover, authorize, test and request tools without admin involvement.

└──▷ WHAT SHIPPED · 4 FEATURES most completely described first ? what's the number?

01 **Tool request workflow with ranked operator inbox** Not checked yet

NEW

77

Employees can request missing tools in plain language (e.g. 'I want to list my Granola meetings', Cloudflare, or a server URL), see similar in-flight requests from colleagues on the same gateway, and support existing requests to avoid duplicates. Platform operators get a ranked request inbox showing all tool requests across every gateway in a project, ordered by number of supporters, while gateway enablement stays a deliberate separate step. The same flow works entirely through MCP tool calls, so an agent can check access and submit a request on a user's behalf without opening the browser.

Let an agent check tool access and request missing tools on a user's behalf — without ever opening the browser — because the Registry's backend is pure MCP tool calls.

📍 Ask Claude (or any MCP client pointed at your gateway): 'Do I have access to Granola? If not, request it for me.' The agent calls the same MCP tools the browser page uses to check access and submit the request.

— Concrete example command and ranking mechanism both named launch-20261007-a030028e

02 **One-click and per-tool OAuth authorization** Not checked yet NEW

66

End-users can authorize an entire app with one click (e.g. all of Gmail) or use granular per-tool authorization that requests only the access that specific tool needs.

Share the gateway URL with your team so every employee can immediately see and authorize the tools available to them — no admin walkthrough needed.

📍 In a browser, navigate to your Arcade MCP gateway URL (e.g. https://<your-gateway>.arcade.dev). Sign in with your existing gateway identity. Browse tools by app, use the search bar to find a specific tool, and click Connect to authorize it.

— Clear mechanism and scope distinction, action is a UI click not a command

launch-20261007-a030028e

03 **Private Registry browser UI for tool discovery** Not checked yet

NEW

65

A web app is now served at your existing MCP gateway URL — paste the URL into a browser to sign in and see every tool on that gateway grouped by app, with full-text search. No feature flag or configuration change is required; any existing Arcade gateway URL automatically serves the Private Registry.

Share the gateway URL with your team so every employee can immediately see and authorize the tools available to them — no admin walkthrough needed.

📍 In a browser, navigate to your Arcade MCP gateway URL (e.g. https://<your-gateway>.arcade.dev). Sign in with your existing gateway identity. Browse tools by app, use the search bar to find a specific tool, and click Connect to authorize it.

— Exact navigation path given, but little mechanism beyond listing

launch-20261007-a030028e

THINNER COVERAGE BELOW

04 **In-browser tool testing before agent use** Not checked yet NEW

50

End-users can run any tool directly from the browser to inspect its output before asking an agent to use it — described as a UI equivalent of an MCP inspector aimed at non-developers.

— Describes the capability but no concrete walkthrough given launch-20261007-a030028e

DEPLOY

◆ ML Platforms & SDKs

Hugging Face

Feedback ⓘ Decision Models on the Hub NOTES ↗

RANK

Hugging Face is an open platform for building, sharing, and deploying machine-learning models, datasets, and applications.

> Hugging Face Hub now recognizes decision models as a first-class category, adding a dedicated tag, icon, filter, and automatic GGUF metadata tagging.

└──▷ WHAT SHIPPED · 1 FEATURE most completely described first ? what's the number?

01 **Decision-model tag and filter on the Hub** Not checked yet NEW

60

The Hub adds a `decision-model` tag with a dedicated icon on model pages and a `decision-model` filter in the Misc section of the Models page. GGUF decision models are automatically tagged from their llama.cpp metadata on upload, so new conversions are indexed without manual tagging.

Browse all decision models on the Hub by filtering with the new dedicated tag.

📍 In the Hub Models page, open the Misc filter section and select decision-model to list all tagged decision models.

— Names the tag, icon, filter location, and automation source. Decision Models on the Hub

WAS THIS USEFUL? 👍 👎

◆ Inference Providers & GPU Clouds

RunPod

Feedback ⓘ New ReleaseAstaBrief 8B on Serverless NOTES ↗

RANK

AI infrastructure with on-demand GPUs and serverless compute. Run training, inference, and batch workloads on the cloud with Runpod.

> RunPod added AstaBrief 8B from Allen AI as a deployable model on Serverless with a validated vLLM recipe.

└──▷ WHAT SHIPPED · 1 FEATURE most completely described first ? what's the number?

01 **AstaBrief 8B on Serverless** Not checked yet NEW 40

AstaBrief 8B from Allen AI is now available as a deployable model on RunPod Serverless, backed by a validated vLLM recipe.

— Names model and recipe but no deployment steps or config.

New ReleaseAstaBrief 8B on Serverless

WAS THIS USEFUL? 👍 👎

DATA

◆ Vector DBs & RAG

Weaviate

Feedback ⓘ announced · Oct 8, 2026 BLOG ↗ RANK

Weaviate is an open-source vector database that stores both objects and vectors, allowing for the combination of vector search with structured filtering with the fault tolerance and scalability of a cloud-native database.

> Weaviate launched Engram, a vector-backed memory server for LLM agents, alongside a Claude Code plugin that gives agents persistent, team-shared, cross-repo memory.

└──▷ WHAT SHIPPED · 2 FEATURES most completely described first ? what's the number?

01 Claude Code plugin for persistent memory

Not checked yet NEW

90

The `weaviate/engram-plugins` Claude Code plugin (`engram@weaviate-engram`) is installed with `/plugin marketplace add weaviate/engram-plugins` followed by `/plugin install engram@weaviate-engram` , giving Claude Code persistent cross-repo and cross-session memory. It supports team-shared memory topics so memories written in one developer's session can be recalled in another's, offers a free tier of up to 1,000 runs per month via `console.weaviate.cloud/engram` , and authenticates using the `ENGRAM_API_KEY` environment variable (settable via `export ENGRAM_API_KEY=<your-api-key>` , e.g. persisted in `~/.zshenv`).

Persist your API key so Engram authenticates across all future shell sessions before installing the plugin.

```
$ export ENGRAM_API_KEY=<your-api-key>
```

Install the Engram memory plugin inside an active Claude Code session so cross-repo memory starts working on your next prompt.

```
$ /plugin marketplace add weaviate/engram-plugins
/plugin install engram@weaviate-engram
```

Persist the Engram API key for all future shell sessions so the plugin authenticates automatically without re-exporting each time.

```sh
export ENGRAM_API_KEY=<your-api-key>
```

— Exact install commands, env var, and free-tier limit given. launch-20261008-318daaad

THINNER COVERAGE BELOW

02 **Engram memory server for LLM agents** Not checked yet NEW

51

Weaviate Engram is a memory server that extracts, transforms, and stores conversation snippets as searchable vector-embedded memories, accessible via a REST API and Python SDK.

— Names REST API and SDK but no endpoint or method given. launch-20261008-318daaad

WAS THIS USEFUL? 👍 👎

EVALUATE

◆ AI Observability & Evals

Braintrust

Feedback ⓘ announced · Oct 9, 2026 BLOG ↗ RANK

Braintrust provides evaluation, tracing, and improvement workflows for AI applications.

> Braintrust added support for using TypeSafe's Jev as a judge scorer, including SDK instrumentation that traces System One calls and configuration options for connecting Jev via API key or native integration.

└──▷ WHAT SHIPPED · 3 FEATURES most completely described first ? what's the number?

01 **TypeSafe tracing via `wrapTypeSafe` SDK instrumentation**

Not checked yet NEW 90

Adds `wrapTypeSafe` from the `braintrust` SDK to instrument TypeSafe client calls, recording each as a `typesafe.systemOne` span with input, question criteria, answers, token usage, and duration.

Instrument a TypeSafe Jev call inside your application so every System One decision appears as a traced span in Braintrust.

typescript

```
pnpm add braintrust@^3.34.0 @typesafe-ai/sdk@^0.6.0

// Set env vars: BRAINTRUST_API_KEY, TYPESAFE_API_KEY
const logger = initLogger({ projectName: "jev-evaluation" });
const client = wrapTypeSafe(new TypeSafeClient());

const response = await client.systemOne({
  state: "I was charged twice. Please refund the duplicate
charge.",
  questions: {
    category: choice("Which team should handle this request?", {
      billing: "Payments and refunds",
      technical: "Software problems",
      other: "Other requests",
    }),
    urgency: score("How urgently should support handle this
request?", [
      "Routine", "Soon", "Urgent",
    ]),
  },
});
console.log(response.answers);
await logger.flush();
```

— Names exact span, SDK function, and includes runnable code example.

launch-20261009-eecb27cd

02 **Jev judge scorer via TypeSafe provider or native integration**

Not checked yet NEW 75

Adds TypeSafe as a supported AI provider under Braintrust's AI providers settings, enabling Jev as a judge scorer using a TypeSafe API key; also supports a native Jev integration (currently request-access) that lets users select Jev from Braintrust's built-in models without a separate TypeSafe API key.

Connect your own TypeSafe API key so Jev is available as a judge scorer across Braintrust experiments and online scoring.

📍 In the Braintrust UI, go to Settings › AI Providers, add TypeSafe as a provider and enter your `TYPESAFE_API_KEY`, then open a scorer configuration and select Jev as the model.

— Gives UI path and two connection methods, but native integration details are limited.

launch-20261009-eecb27cd

THINNER COVERAGE BELOW

03 **Jev scorer result metadata and configuration formats**

Not checked yet NEW 50

The Jev scorer stores confidence, selected choice, and per-choice probabilities in scorer result metadata for every experiment and online scoring run; it accepts text input and supports both Classifications and Scores configurations, usable in experiments and online scoring.

— Describes metadata fields and configs but no example or UI path given.

launch-20261009-eecb27cd

AI MODELS

◆ Frontier Models

Mistral AI

Feedback ⓘ updated · Oct 9, 2026 NOTES ↗ RANK

Learn how to deploy and use Mistral AI's Large Language Models with our comprehensive documentation, guides, and tutorials.

> Mistral AI shipped Mistral Large 4 in Public Preview alongside a wave of new models (Voxtral TTS, Mistral Small 4, Leanstral, Mistral Moderation 2603), made OCR 4.1 generally available with expanded OCR API controls, added Custom Guardrails for Agents and Conversations, and pushed several breaking API and parameter-validation changes.

└──▷ WHAT SHIPPED · 15 FEATURES most completely described first ? what's the number?

01 **OCR API granularity, page range and block output controls**

Not checked yet IMPROVED 95

`confidence_scores_granularity` now supports `'block'` in addition to `'page'` and `'word'`: `'page'` returns page-level scores, `'block'` returns page- and block-level scores, and `'word'` returns page- and word-level scores. The `pages` parameter now accepts a comma-separated string of digits and ranges (e.g. `'0,1,2'`, `'0-5'`, `'0,2-4'`) in addition to a list of integers. `include_blocks`, when set to `true`, returns a `blocks` array per page with paragraph-level bounding boxes and a structural label in reading order.

— Names every OCR parameter and value with exact behaviour snapshot-20261009

02 **Mistral Large 4 launches in Public Preview** Not checked yet NEW 70

`mistral-large-4` (Mistral Large 4) is now available in Public Preview as an open-weight, multimodal, Mixture-of-Experts model with a 1M token context window.

— Names model id, architecture and context size but no API example snapshot-20261009

03 **OCR 4.1 generally available** Not checked yet NEW 70

`mistral-ocr-4-1` (OCR 4.1) is now Generally Available, with `mistral-ocr-4` and `mistral-ocr-latest` pointing to it; the prior `mistral-ocr-4-0` is deprecated and retires on September 30, 2026.

— Names model ids and retirement date, no usage example snapshot-20261009

04 **Custom Guardrails for Agents and Conversations** Not checked yet

NEW 70

Agents and Conversations gain Custom Guardrails support via the `guardrails` parameter on an Agent and a `guardrails` field on `POST /v1/conversations`.

— Names exact endpoint and parameter but no scenario detail snapshot-20261009

05 **`p` parameter added to streamed completion chunks** Not checked yet

70

BREAKING

Completion API streamed chunks now include a `p` parameter, which may break applications that rely on strict chunk parsing; users of the `mistral-common` package must upgrade to version 1.8.4 or higher, while official SDK users are unaffected.

— Gives exact field, affected package and required version snapshot-20261009

06 **Strict API parameter validation enforced** Not checked yet BREAKING

60

The API now strictly enforces validity of all parameters; previously unsupported parameters were silently ignored, but requests containing them now return the error `Extra inputs are not permitted`.

— Names exact error message and before/after behaviour snapshot-20261009

07 **Model renames and deprecations across lines** Not checked yet

DEPRECATED

60

`mistral-tiny` is renamed to `mistral-tiny-2312` and will be deprecated in three months; the previous `mistral-medium` endpoint is dated and tagged as `mistral-medium-2312`; and `zai-glm-5-2` is deprecated and retires on October 31, 2026, with `zai-glm-5-3` as its replacement.

— Names old and new model ids with retirement dates snapshot-20261009

THINNER COVERAGE BELOW

08 **Voxtral text-to-speech model** Not checked yet NEW

55

`voxtral-tts-2603` (Voxtral TTS) is a new text-to-speech model with zero-shot voice cloning, multilingual support, and real-time streaming.

— Describes capabilities, no API usage shown snapshot-20261009

09 **Mistral Small 4 hybrid model** Not checked yet NEW

55

`mistral-small-2603` (Mistral Small 4) is a hybrid instruct/reasoning/coding multimodal model with a 256k token context window.

— Names model, context size, lacks usage example snapshot-20261009

10 **Leanstral code agent for Lean 4** Not checked yet NEW

55

`labs-leanstral-2603` (Leanstral) is an open-source code agent for Lean 4 formal proof engineering; the prior `labs-leanstral-1-5` is deprecated and retires on September 30, 2026.

— Names model and deprecation date, limited mechanism detail snapshot-20261009

11 **`tool_call_id` now mandatory for tool messages** Not checked yet 50

BREAKING

The `tool_call_id` field is now mandatory in chat messages with the `tool` role.

— Names the field and role but no migration example snapshot-20261009

12 **`pixtral-12b` temperature parameter downscaled** Not checked yet 50

BREAKING

The temperature parameter of `pixtral-12b` has been downscaled by a multiplier of 0.43, which may affect output consistency for existing integrations.

— Gives exact multiplier but no remediation steps snapshot-20261009

13 **Documentation URL restructuring** Not checked yet BREAKING 35

Documentation paths previously under `/le-chat/*` (and formerly `/mistral-vibe/*`) now redirect to `/vibe/*`.

— Names old and new paths, minimal further context snapshot-20261009

14 **Mistral Moderation 2603 model** Not checked yet NEW 30

Adds the `mistral-moderation-2603` (Mistral Moderation 2603) model.

— Bare model name, no further description given snapshot-20261009

15 **Devstral 2.0 moves to paid access** Not checked yet BREAKING 25

Devstral 2.0 moves to paid API access.

— Bare statement with no pricing or migration detail snapshot-20261009

└──▷ BREAKING ON UPGRADE

! The `p` parameter added to Completion API streamed chunks may break applications that rely on strict chunk parsing; users of the `mistral-common` package must update to version 1.8.4 or higher (official SDK users are unaffected).

! The `tool_call_id` field is now mandatory in chat messages with the `tool` role.

! The API now strictly enforces validity of all parameters; previously unsupported parameters were silently ignored, but requests containing them now return the error `Extra inputs are not permitted`.

! The `mistral-tiny` endpoint is renamed to `mistral-tiny-2312` and will be deprecated in three months.

! The previous `mistral-medium` endpoint is dated and tagged as `mistral-medium-2312`.

! Documentation paths previously under `/le-chat/*` now redirect to `/vibe/*` (previously also `/mistral-vibe/*`).

! `mistral-ocr-4-0` is deprecated and retires on September 30, 2026; use `mistral-ocr-4-1` or `mistral-ocr-latest` instead.

! `labs-leanstral-1-5` is deprecated and retires on September 30, 2026.

! `zai-glm-5-2` is deprecated and retires on October 31, 2026; use `zai-glm-5-3` instead.

! Devstral 2.0 moves to paid API access.

! The temperature parameter of `pixtral-12b` has been downscaled by a multiplier of 0.43, which may affect output consistency for existing integrations.

Anthropic

Feedback ⓘ announced · Oct 6, 2026 BLOG ↗ RANK

Anthropic provides Claude AI models and APIs for building applications that generate, analyze, and automate work.

> Anthropic released Claude Fable 5.1 alongside a verified-organization variant, Claude Mythos 5.1, and overhauled its Cyber Verification Program into three tiered access levels while announcing a forthcoming Enterprise Frontier Safeguards offering.

└──▷ WHAT SHIPPED · 3 FEATURES most completely described first ? what's the number?

01 **Cyber Verification Program expanded to three tiers** Not checked yet

NEW

78

Anthropic replaced the prior two-program structure (Project Glasswing and the original CVP) with a tiered Cyber Verification Program (CVP). Defense Access covers security operations center and incident-response tasks, malware reverse-engineering, and vulnerability analysis and validation, available to security teams, critical-infrastructure operators, smaller security firms, open-source maintainers, and individual researchers. Red Team Access adds authorized penetration testing and red-teaming against systems organizations are authorized to test, including IT systems in critical industries, while still applying real-time blocks on actions such as deploying ransomware, damaging physical systems, or pen testing high-risk safety systems. Specialized Access, reserved for a limited set of verified organizations and reviewed in collaboration with the US government, removes the fewest blocks for testing safety-critical systems such as flight operating systems, power grids, telecom networks, interbank transfer infrastructure, and government administrative networks. Existing Project Glasswing members automatically transition to Specialized Access without reapproval for current models, and existing CVP members retain current settings for previous models while being automatically evaluated for access to Claude Opus 5.5, Claude Sonnet 5.5, and Claude Mythos 5.1.

— Full tier mechanics and migration path, but no API endpoint launch-20261006-f45fe706

02 **Claude Fable 5.1 and Mythos 5.1 model release** Not checked yet NEW

65

Claude Fable 5.1 strengthens long-running agentic coding, multistep research, and document/spreadsheet/slide work at the same price as Claude Fable 5. Claude Mythos 5.1 is an identical-capability, identical-pricing variant of Fable 5.1 available exclusively to organizations verified through Anthropic's verification programs such as the Cyber Verification Program. Only Claude Fable 5.1 and Claude Mythos 5.1 can read Claude Fable 5.1's extended thinking blocks, and cache reads for Claude Fable 5.1 are priced at a quarter of the standard input cost, with input and output prices otherwise matching Claude Fable 5.

— Named models and pricing ratio but no API usage specifics product docs

THINNER COVERAGE BELOW

03 **Enterprise Frontier Safeguards announced** Not checked yet NEW

40

Anthropic announced Enterprise Frontier Safeguards (EFS), a forthcoming solution combining zero data retention with robust safeguards, letting eligible organizations store data in cloud infrastructure they control.

— Announced only; no availability or enrollment details yet launch-20261006-f45fe706

Alibaba Qwen Models

Feedback ⓘ qwen-image-2.1-turbo

NOTES ↗ RANK

Qwen is Alibaba's language and multimodal model family, including coding, vision, image, speech, and reasoning models.

> Alibaba added qwen-image-2.1-turbo, a new image model that unifies generation and editing with native transparency support and multi-reference local control.

└──▷ WHAT SHIPPED · 1 FEATURE most completely described first ? what's the number?

01 **qwen-image-2.1-turbo image generation model** Not checked yet NEW

55

`qwen-image-2.1-turbo` is a new image model supporting native transparency and unified generation and editing in a single model. It supports versatile editing with multiple references, local control, and fidelity-preserving edits, and delivers realistic textures, typography rendering, and portrait generation as built-in capabilities.

— Names the model and lists capabilities but no usage example or limits
